

Stop Buddy Punching

The **Jupiter 9.0 Time and Attendance System** is an integrated software / hardware combination that allows companies total control over their employees' time and attendance data. The system offers unparalleled performance, with the flexibility and functionality required for today's business environment.

Jupiter automatically consolidates, calculates and processes your information for reporting and communicating directly to your outside payroll service or in-house payroll system. In addition it will generate all kinds of management reports upon which informed, timely decisions can be made.

Features:

- Automates time and attendance data calculation and reporting.
- Eliminates traditional punch cards, job tickets or time sheets.
- Reduces clerical errors associated with manual calculations.
- Process payroll in seconds instead of hours or days.
- Easy to use management reports with available custom report generator.
- Handles multiple job or department transfers and rate changes.
- Archives historical data for easy retrieval of year-to-date information.
- Full-featured scheduling by employee, department or job.
- Exports payroll data to over 100 payroll programs and service providers.
- Screen-based password security limits users access to information and functions.
- Audit trail report displays tracks all changes to data for user accountability.
- ODBC compliant, non-proprietary database for connectivity to other applications.
